INTRODUCTION

This catalog is an updated and expanded version of an earlier drill-hole data catalog, Open-File Report 90-260 (Dart, 1990). This new version includes geologic data for more than 150 additional drill holes. The total number of drill holes in the catalog now exceeds 575. These drill holes are from seven States in a study region extending from lat 33.5° N. to 38.75° N. and long 87° W. to 92.5° W. (fig. 1).

As a companion publication to this catalog, I have prepared a series of computer-generated, subsurface geologic maps of major Paleozoic stratigraphic units within the Mississippi Embayment (R.L. Dart, unpub. data, 1992). Some of the data in this catalog were used to produce these maps.

DRILL-HOLE DATA

The data contained in this catalog also exists as a Geographical Information Systems ARC/Info computer database. As a service to interested users, copies of this database may be obtained from the author (USGS, Denver Federal Center, MS 966, Denver, CO 80225-0046). It is my intent that this database exist as a research tool and that it be routinely updated. With this goal in mind, potential users and data contributors are encouraged to make comments and submit supplemental data.

Geologic data in this catalog are from drill-holes that are known to have, or are inferred to have, reached a total depth at the Paleozoic-Cretaceous contact, within the Paleozoic section, or in Precambrian basement. However, the catalog is not a complete listing of all pre-Cretaceous drill-holes within the study region. Some important omissions in the data may exist despite an effort to consult a wide variety of potential data sources.

The data are presented in two parts. Part A is a complete listing of the data, and Part B is an abridged listing of selected data. Part-B data tabulation is intended to aid the user in locating specific data that may be of particular interest.

The drill-hole data (Part A) are in seven data tables containing information from drill holes located in one of the seven States (Arkansas, Illinois, Kentucky, Mississippi, Missouri, Tennessee) within the study region. Each data entry is given a unique reference or index identifier consisting of a two-letter State abbreviation (postal code) and a sequence number.

The selected pre-Cretaceous drill-hole data (Part B) are in four data tables. Table 1 is a listing of drill-hole names with information on total depths drilled and the lithologies at those depths. Tables 2 through 4 are listings of subsea depths to specific stratigraphic surfaces. Included also are the Geologic names of the subcrop units at these surfaces and the thicknesses of these specific stratigraphic intervals.

Acknowledgments

I would like to thank the many individuals and institutions who have generously contributed drill-hole data. In addition to those listed in Personal Communications, I would also like to thank F.A. McKeown, M.N. Machette, and H.S. Swolfs (U.S. Geological Survey).

Tabular Information for Mississippi Embayment Drill Holes to the Paleozoic Surface

The tabular data format and the abbreviations used in these tables are as follow:

Well Index Identification: Arkansas (AR), Illinois (IL), Kentucky (KY), Mississippi (MS), Missouri (MO), Tennessee (TN)

Name: Operator/Owner

County:

Location: In degrees latitude and longitude; section (sec), township (T), and range (R)
north (N), south (S), east (E), west (W)

Ground Level: rotary table (rt), derrick floor (df), and kelly bushing (kb), Knox tabulation (tab.), Grohskopf

Total Depth: In feet relative to sea level

Completion Date: N.D. indicates not determined; month/day/year

Data Source(s): Arkansas Geological Commission (AGC), Missouri Geological Survey (MGS), Kentucky Geological Survey (KGS).

Remarks:

Drill-Hole Type: Oil and gas (O&G), exploration test (ET), municipal or industrial water (MW), and industrial waste-water storage (WW)

Paleozoic Surface Data: Blanks indicate no data available.

Depth	Formation member (mbr) formation (fm)	Age Mississippian (Miss.)	Lithology sandstone (ss) limestone (ls) dolomite (dolo) dolomitic limestone (ls(dolo)) shale (sh) quartz (qtz.) quartzite (qzite) arkosic (ak) sandy (sdy) siltstone (siltst) igneous (igx) crystalline (cryst.)

And the following abbreviations are self explanatory and may be applied to all entries:

questionable data (?), approximate (~), equivalent (equiv.)

Remarks: Denison (1984) gives the depth to Precambrian basement at -14,145 ft; however, Hendricks (1988) gives the depth to Precambrian basement at -14,169 ft. This difference may be because the Denison value may have been calculated from the height of the Kelly bushing not ground surface. Electric logs were run and a drill-stem test (DST) was attempted (Hickman, p.c., 1991).
